

Lung Cancer Screening

\$99 is a small price to pay for peace of mind.

Cost includes the CT scan and the radiologist fee. This early detection screening is not currently reimbursed by most health insurance carriers.

TriStar Summit Medical Center is pleased to offer CT lung cancer screenings for those who may be at risk.* The screening is non-invasive, painless and only takes a few minutes.

Screens in this program are reviewed by a multidisciplinary team of physicians, including a pulmonologist, thoracic surgeon, medical oncologist, radiation oncologist and radiologist.

Screening Criteria:

- 30-pack year history of smoking and be between the ages of 55-74, or be over 50 with a history of a 20-pack year history and one other cancer-related risk factor.
- You must meet specific criteria to participate
- This test is not covered by insurance, but is available for \$99.

** Must meet NCCN Guidelines Criteria*

*** Pack year means a person smokes one pack per day for a full year*
